

AMENDMENTS TO THE CLAIMS

Please cancel claims 1-4, 6-10, 12 and 14 without prejudice.

Claims 1-4. (Canceled).

5. (Previously Presented) A notification system for communicating between a sender cellular phone and a receiver cellular phone comprising:

a base station controlling device for receiving receiver information concerning said receiver cellular phone, and for controlling a base station covering an area indicated in said receiver information;

a sub-system configuration in said base station for sending power-ON information based on said receiver information received from said base station controlling device;

a device configuration in said receiver cellular phone for receiving said power-ON information from said base station even if a main power source of said receiver cellular phone is in an OFF state; and

a location information system for sending said receiver information and a signal for switching said receiver cellular phone to be in said ON state for incorporation into a Global Positioning Satellite signal.

Claims 6-10. (Canceled).

11. (Previously Presented) A cellular phone comprising:

a device configuration for receiving a signal from a base station for switching to be in an ON state and being capable of switching a main power source to be in said ON state even if said main power source is in an OFF state;

a location information detecting section for detecting location information and main power source ON information from a Global Positioning Satellite signal;

a main power source ON information detecting section for detecting said main power source ON information from said Global Positioning Satellite signal; and

a power source section for supplying electric power to said main power source ON information detecting section and said location information detecting section to be kept in an ON-state, even if said main power source is in said OFF state, and for turning ON said main power source when said main power source ON information is input from said main power source ON information detecting section.

12. (Canceled).

13. (Previously Presented) A cellular phone comprising:

a device configuration for receiving a signal from a base station for switching to be in an ON state and being capable of switching a main power source to be in said ON state even if said main power source is in an OFF state, wherein said cellular phone is used as a receiver cellular phone in a notification system for communicating between a sender cellular phone and said receiver cellular phone, wherein said notification system comprises:

a system configuration for allowing said sender cellular phone to transmit an ON state indication signal indicating to switch ON a main power source of said receiver cellular phone through a radio wave to said receiver cellular phone, such that a main power source of said receiver cellular phone is remotely turned ON,

a base station controlling device for receiving receiver information concerning said receiver cellular phone which said main power source is in said OFF state, and for controlling a base station covering an area indicated in said receiver information, said base station further sending said receiver information, and

a location information system for sending said receiver information, a signal for switching said receiver cellular phone to be in said ON state by carrying on a Global Positioning Satellite signal,

wherein said base station comprises a sub-system configuration for sending power-ON information based on said receiver information received from said base station controlling device; and

wherein said receiver cellular phone comprises a device configuration for receiving said power-ON information from said base station even if said main power source is in said OFF state.

14. (Canceled).
